

SuperSonic Imagine installs its 1000th Aixplorer[®] ultrasound system with UltraFast[™] imaging at the Aubagne Radiology Center in France
SuperSonic Imagine's Aixplorer - the only ultrasound system providing real-time quantifiable ShearWave[™] Elastography

Aix-en-Provence, France, January 7, 2015 - SuperSonic Imagine (Euronext: SSI, FR0010526814), a company specializing in ultrasound medical imaging (sonography), announces that its worldwide installed base has reached 1000 systems. The 1000th Aixplorer ultrasound system was delivered to the Aubagne Radiology Center in France.

The Aixplorer ultrasound system provides exceptional image quality and is equipped with SuperSonic Imagine's proprietary ShearWave Elastography. This technology acquires images 200 times faster than conventional ultrasound which permits the visualization and measurement of tissue stiffness in real time. By providing real-time quantitative information, SuperSonic Imagine's ShearWave technology helps physicians quickly identify potentially malignant and other diseased tissue.

The innovative technology of SuperSonic Imagine's Aixplorer is increasingly requested by private radiology practices, clinics, hospitals and cancer centers worldwide. The technology goes beyond the limits of conventional ultrasound and may replace other, more expensive techniques used for diagnostic, screening and therapeutic follow-up.

"Since the beginning of 2011, we have been using two Aixplorer ultrasound systems on a daily basis for general imaging. We are very satisfied with the system's overall performance in our clinical setting." said Dr. Menut, Radiologist at the Aubagne Radiology Center. "For 2015, we have equipped ourselves with the latest version of Aixplorer and its musculoskeletal application in order to provide the best imaging tools to our patients."

"SuperSonic Imagine is very proud to deliver its 1000th Aixplorer to the Aubagne Radiology Center." said Jacques Souquet, Founder and CEO of SuperSonic Imagine. "Radiologists are perceptive to innovation that is strategic in terms of diagnostic improvements, cost reduction and patient outcomes in both private clinic and hospital settings. The Aixplorer with ShearWave technology makes a clear difference in patient management."

About SuperSonic Imagine

Founded in 2005 and based in Aix-en-Provence (France), SuperSonic Imagine is a company specializing in medical imaging. The company designs, develops and markets a revolutionary ultrasound system, Aixplorer®, with an UltraFast™ platform that can acquire images 200 times faster than conventional ultrasound systems. Aixplorer® is the only system that can image two types of waves: ultrasound waves ensure excellent image quality and shear waves, which allow physicians to visualize and analyze the stiffness of tissue in a real-time, reliable, reproducible and non-invasive manner. This innovation, ShearWave™ Elastography, significantly improves the detection and characterization of numerous pathologies in several applications including breast, thyroid, liver and prostate. SuperSonic Imagine has been granted regulatory clearances for the commercialization of Aixplorer® in the main global markets. Over the past years, SuperSonic Imagine enjoyed the backing of several prestigious investors, among which Auriga Partners, Edmond de Rothschild Investment Partners, Bpifrance, Omnes Capital and NBGI.
